

Animal homes

Background knowledge

Animals can be found living in almost any place on Earth. The place where an animal normally lives is called its *habitat*. There are many different kinds of habitats, such as in grass, under the ground, in trees, in ponds or rivers, on the seashore, and in the ocean.

Science activity

Where would these animals normally live? Draw a line between each animal and its habitat.

Pond

Ocean

Worm

Water snail

Stickleback

Centipede

Crab

Frog

Rabbit

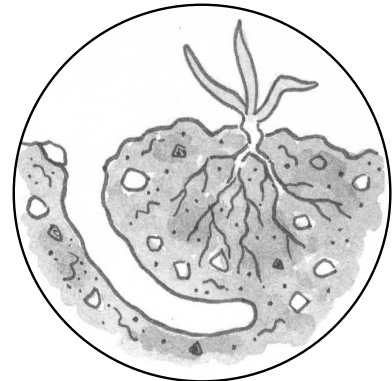

Mackerel

Millipede

Butterfly

Starfish

Woodpecker

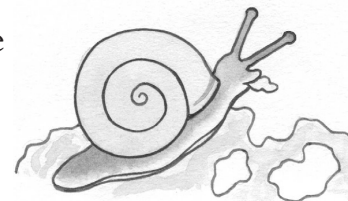

Soil

Woodland

Science investigation

Create a poster about one type of habitat. Include the plants and animals that live in the habitat. What type of habitat is it? What is the source of food and shelter for the animals?

Animal homes

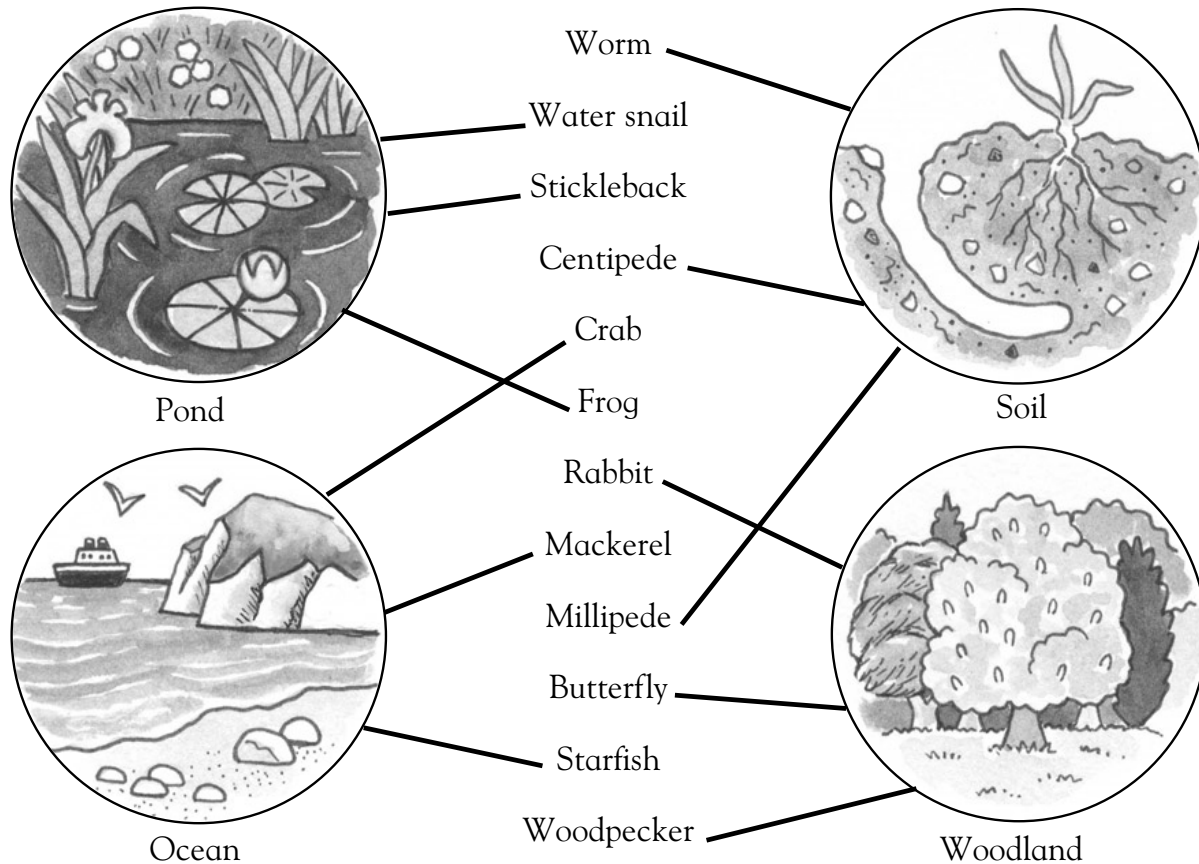

Background knowledge

Animals can be found living in almost any place on Earth. The place where an animal normally lives is called its *habitat*. There are many different kinds of habitats, such as in grass, under the ground, in trees, in ponds or rivers, on the seashore, and in the ocean.

Science activity

Where would these animals normally live? Draw a line between each animal and its habitat.

Science investigation

Lines in the activity could also be drawn from the soil-dwellers to the woodland. Aquariums and terrariums are great examples for habitat study.
